CSAI-472-P2-M02

Introduction

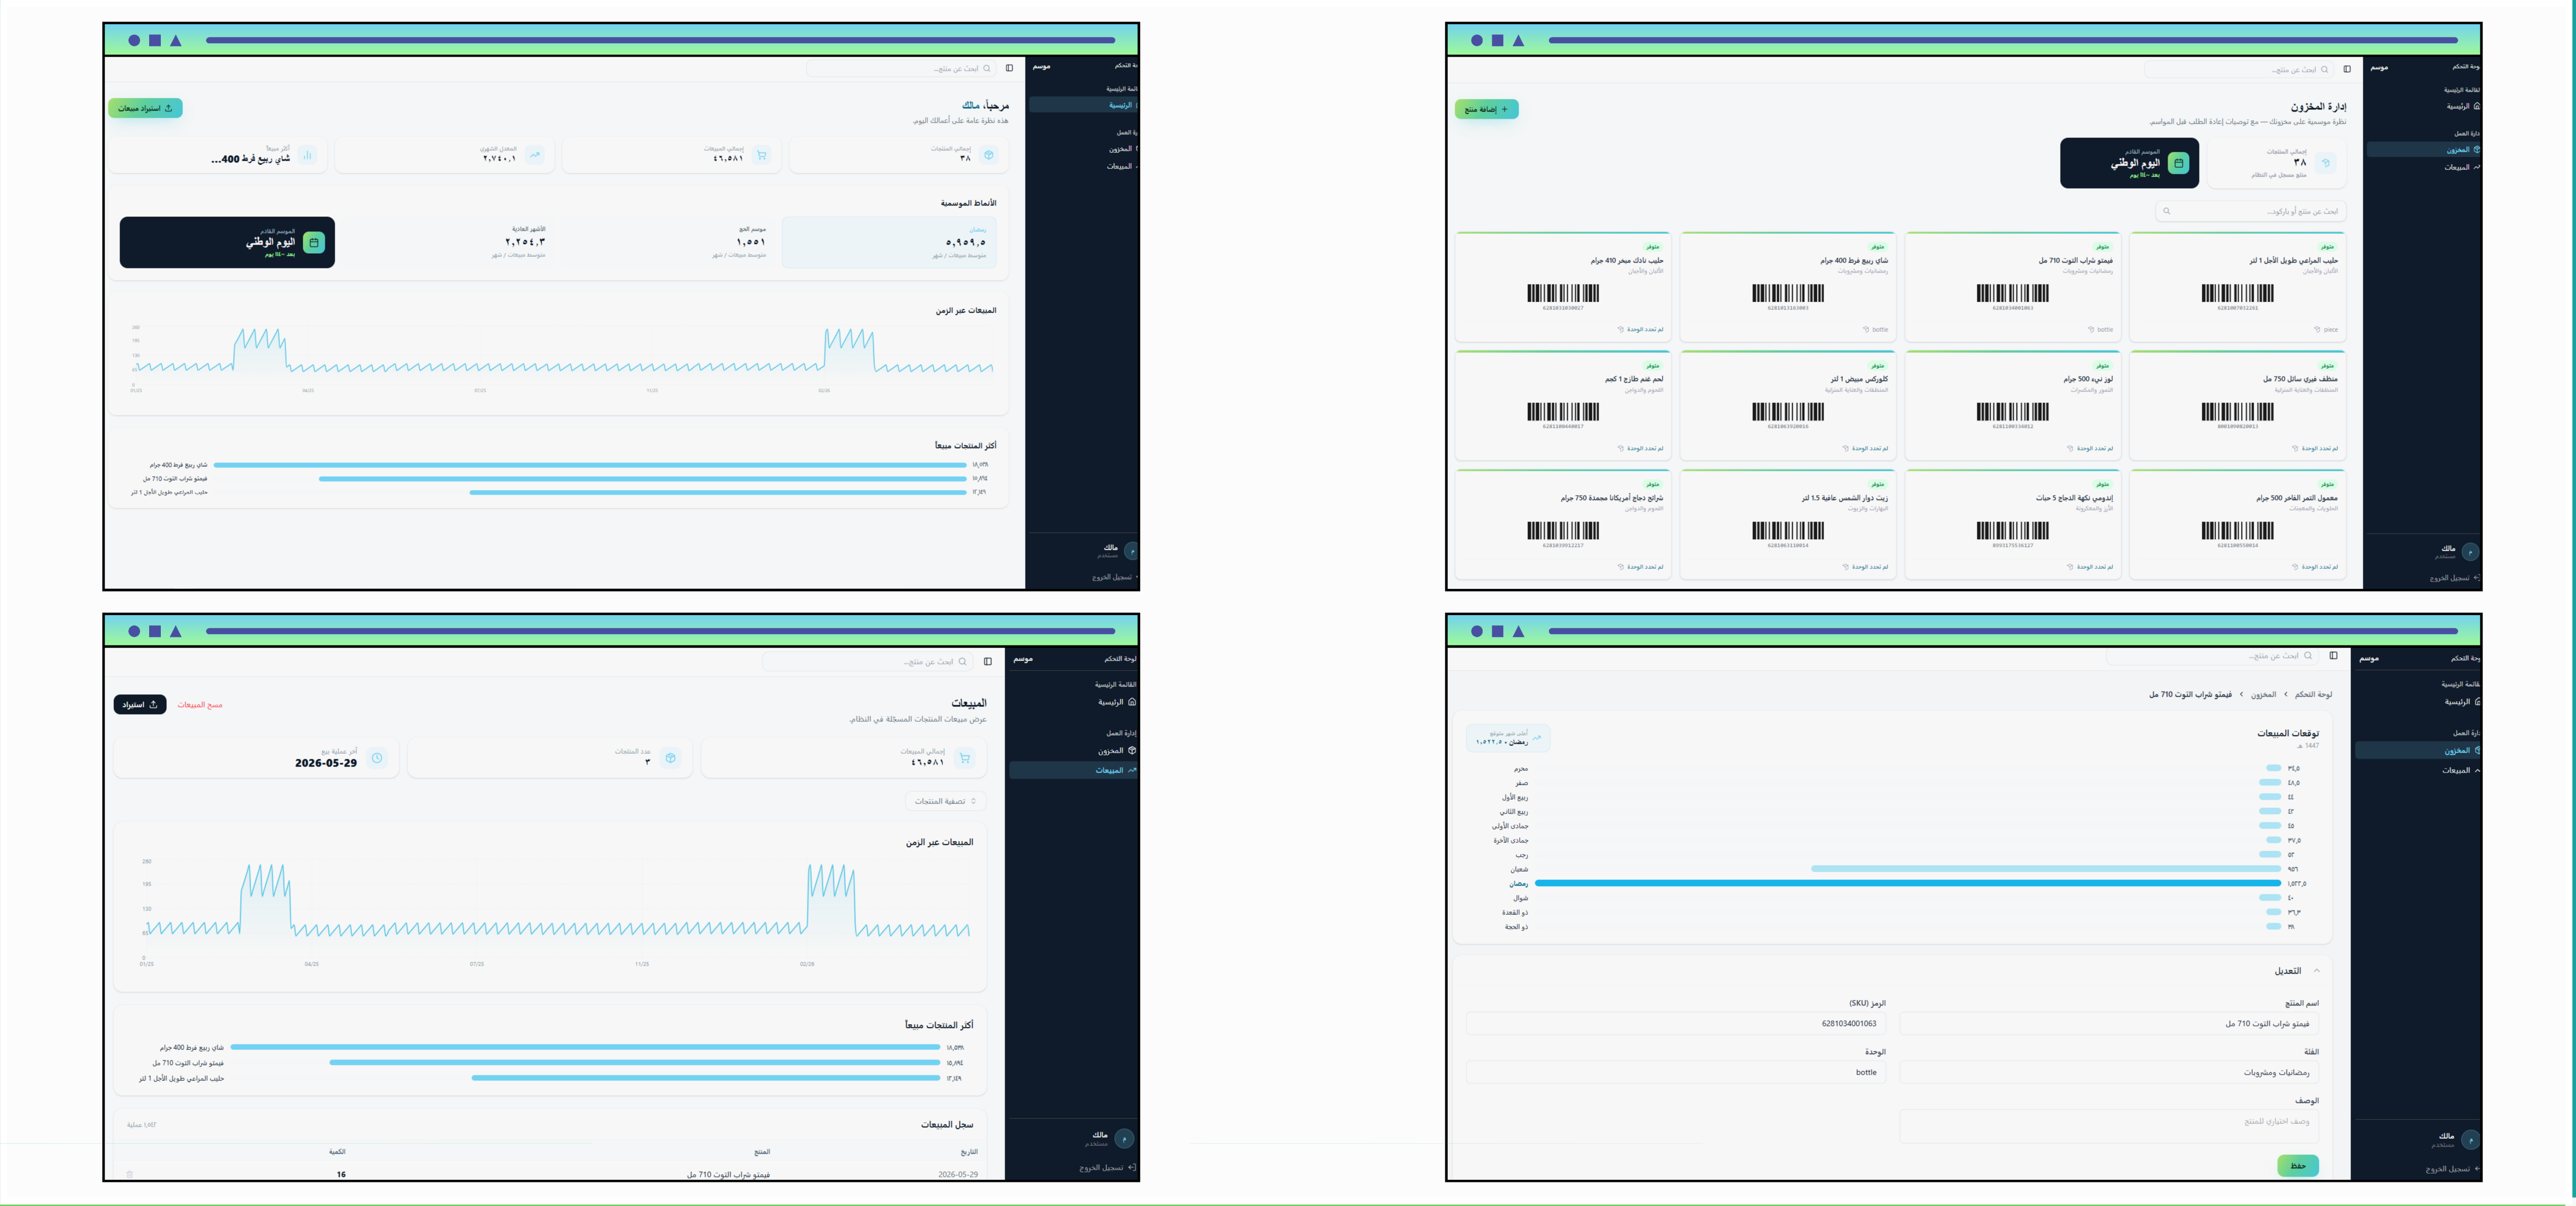

Mawsem is an AI-powered seasonal demand forecasting system designed for Saudi retail.

It addresses the challenge of predicting stock requirements before Hijri seasons by analyzing historical sales data with native Hijri calendar support. The system delivers clear stock quantity recommendations to procurement managers reducing overstock and stockouts before Ramadan, Eid, and Hajj.

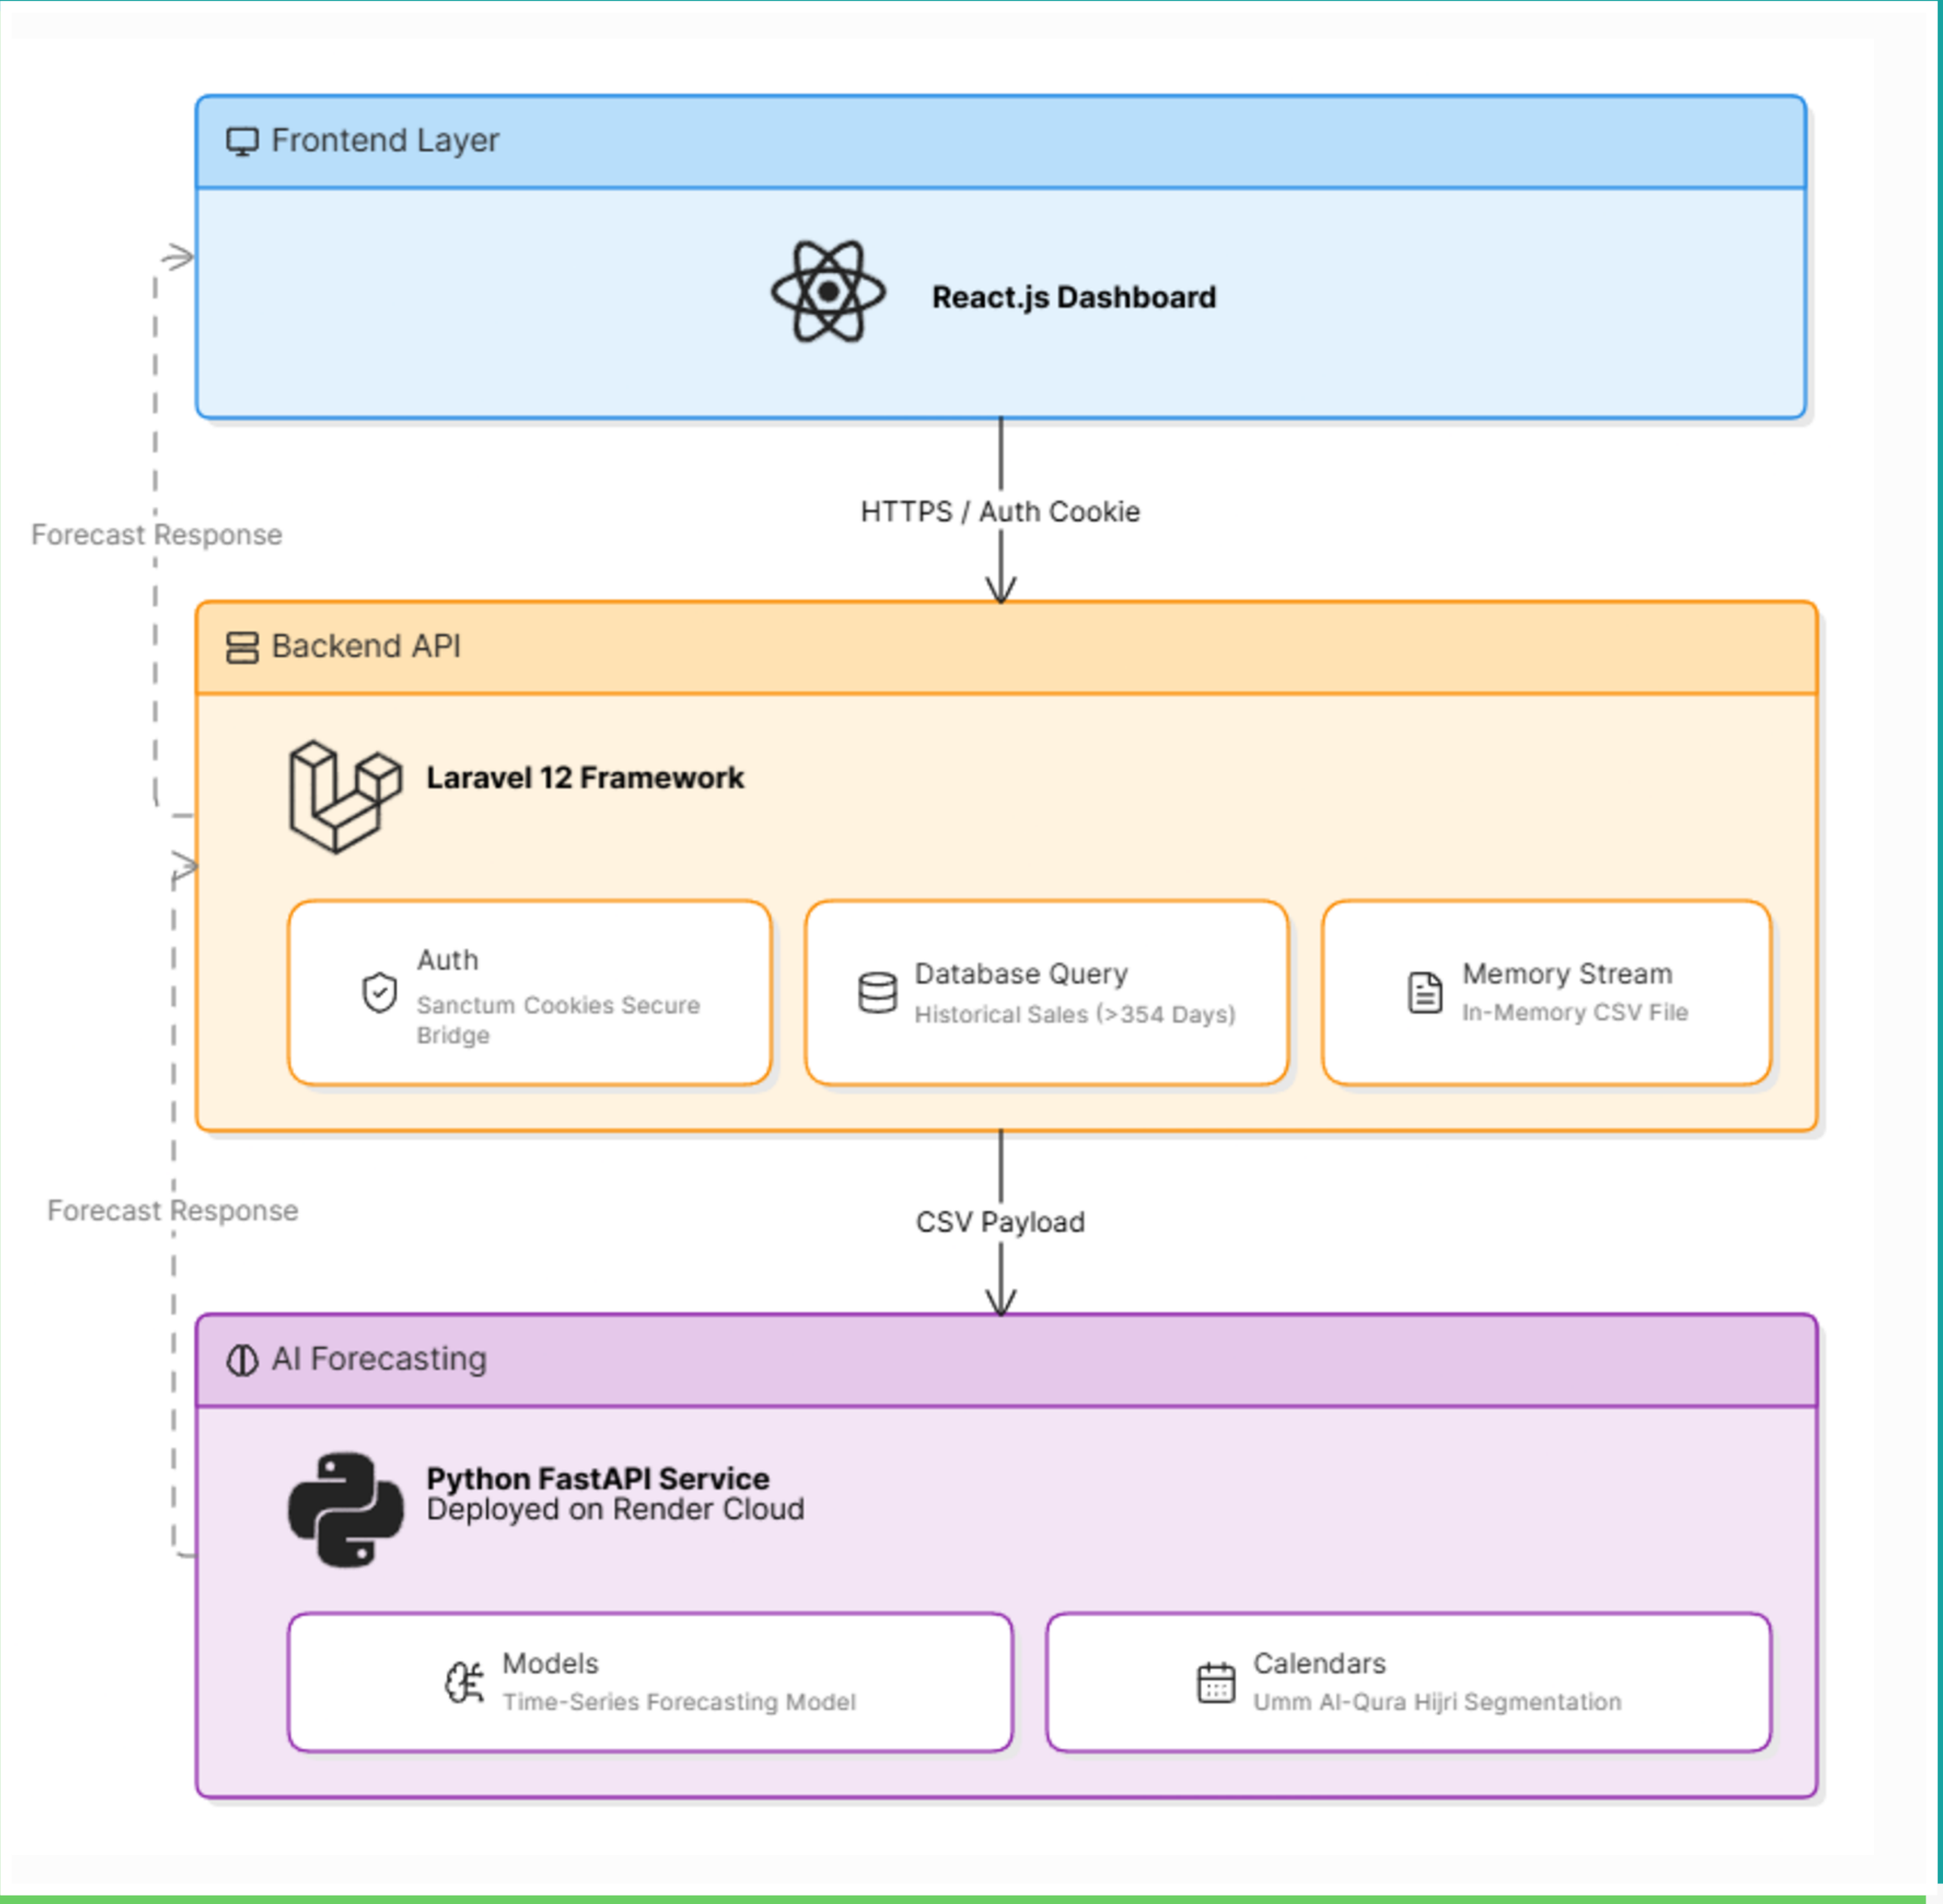

Goals

- Forecast seasonal product based on sales with native "**Hijri Calendar**"
- Visualize forecasted demand curves.
- Stock quantity recommendation.
- Simple interface for non-technical procurement managers.
